

CARBOAUTOMATYKA SA

2008-06-03

Carboautomatyka SA Enterprise of Completing and Assembly of Automation Systems is a company with a tradition that goes back over 30 years.

The company's offer is addressed to mining, power engineering and power and heat engineering. The scope of activities includes:

- Automation of extraction and coal enrichment processes through the use of:
 - control, monitoring and supply systems for machinery and equipment working underground in mines
 - SOLARIS – a versatile process management system
- Monitoring of environmental parameters – security systems
 - methane control rooms for mine air monitoring
 - individual measuring appliances – personal methane detectors, digital detectors
- Control, monitoring and safety systems in communication tunnels
- Design and comprehensive implementation of industrial facilities in power engineering and automation – construction of management centres

We are capable of designing and implementing any required project, proof of which are the many projects we have already carried out. Our offer is not just limited to system implementation. It also includes professional consulting in restructuring projects, as well as streamlining technological processes and company operation.

Our solutions are flexible and functional, thanks to which they can be introduced in companies of any size and operating profile.
